PRESS RELEASE

Kurma Partners invests in Cardiologs

Paris, October 9, 2017

We are pleased to announce the $6.4 million financing of Cardiologs Technologies. <u>Cardiologs</u> uses image recognition and deep learning to analyze an ECG and ambitions to bring deeper analysis and information to cardiologists. With its solution, Cardiologs will bring cardiology to the next level.

Kurma Diagnostics fund participated to the financing with Idinvest, ESAI, Partech and existing investor F3A. Our Partner Philippe Peltier will serve on the board of directors. We are convinced that Artificial Intellingence will have a major impact on healthcare. We are very impressed by the execution capabilities of the team as well as the efficiency of Cardiologs' solution. We are adding one portofolio company that will disrupt Digital Health.

Now FDA cleared and CE marked, Cardiologs can read ECG recordings from any digital device. Ambulatory ECG analysis and reporting is a labor-intensive process, resulting in important costs and delays for arrhythmia detection. By applying the latest research in Artificial intelligence, Cardiologs provides a web solution to streamline this process at large scale, enabling the highest diagnostic yield, for the least physician effort.

Please contact Philippe (pp@kurmapartners.com) for further information.
